Lesson Planning AB Studios

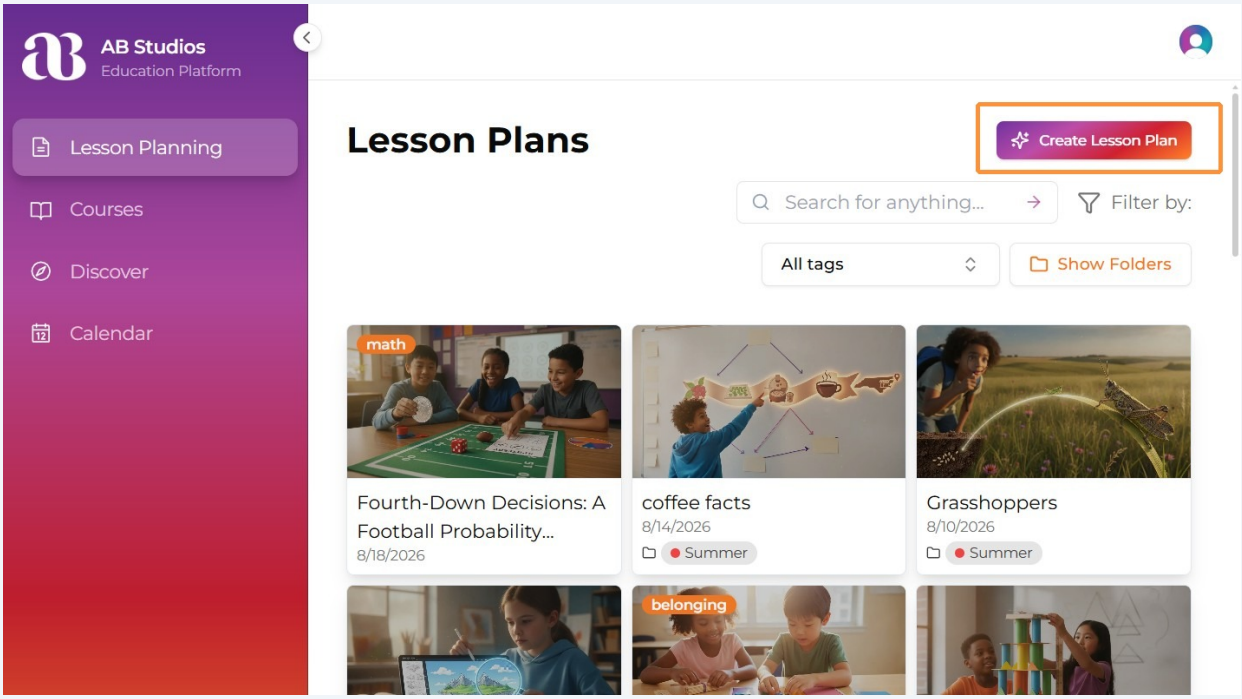

Learn how to use AI-assisted tools to build and refine your educational materials. This guide will walk you through customizing your lesson plan structure, selecting appropriate tags, and organizing your content into folders for easy access.

Create a Lesson

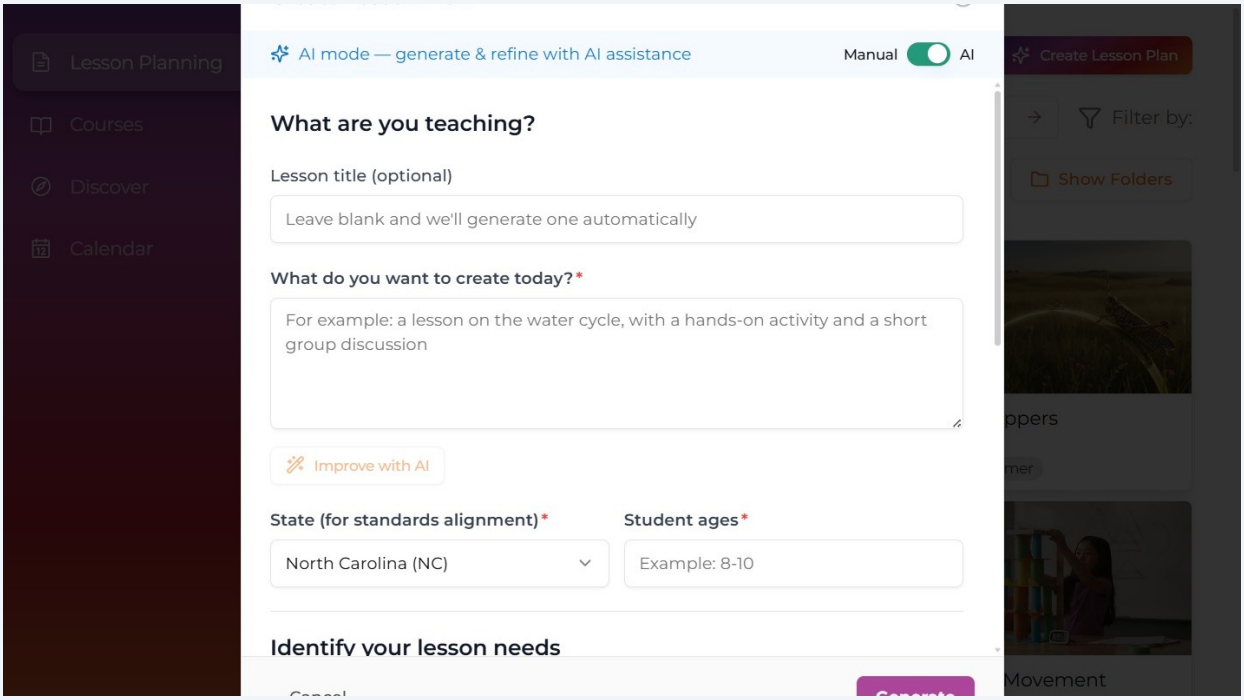

1 On the lesson plan tab, this is where all the lessons created by you and other educators in your organization are found. To create a new lesson plan, create.

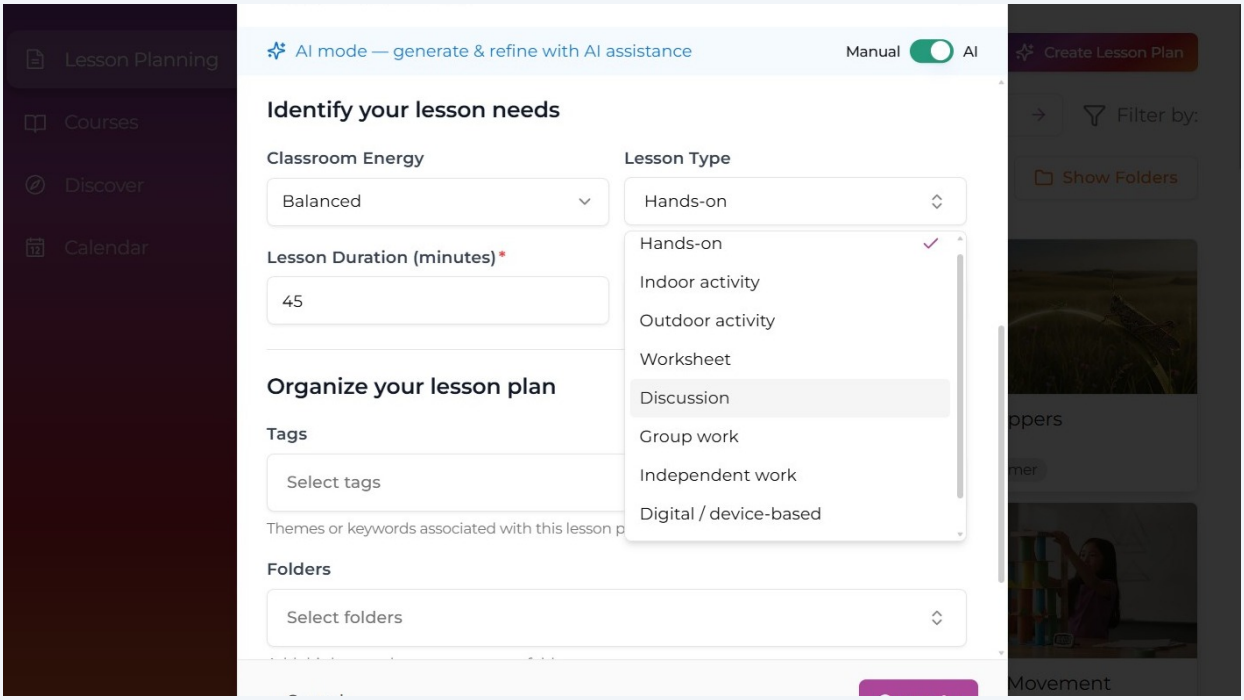

2 To create a lesson plan, click "Create Lesson Plan"

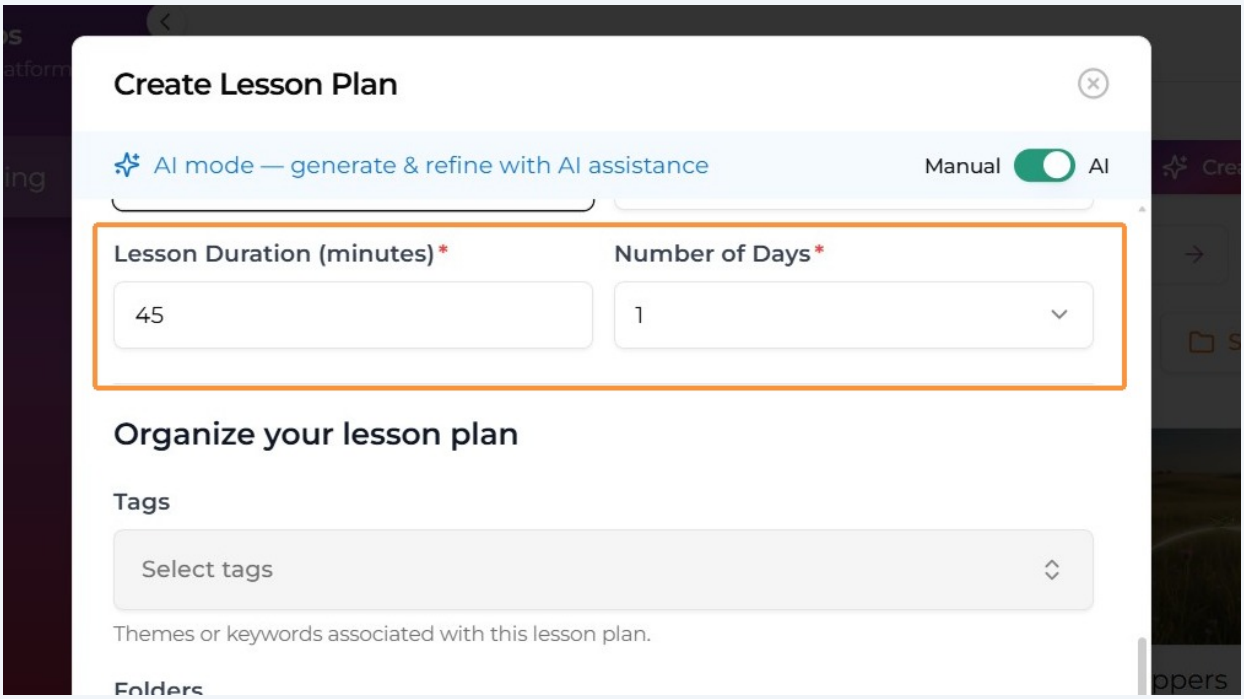

3 Use this space to describe your lesson, materials available, select your state and your students' ages

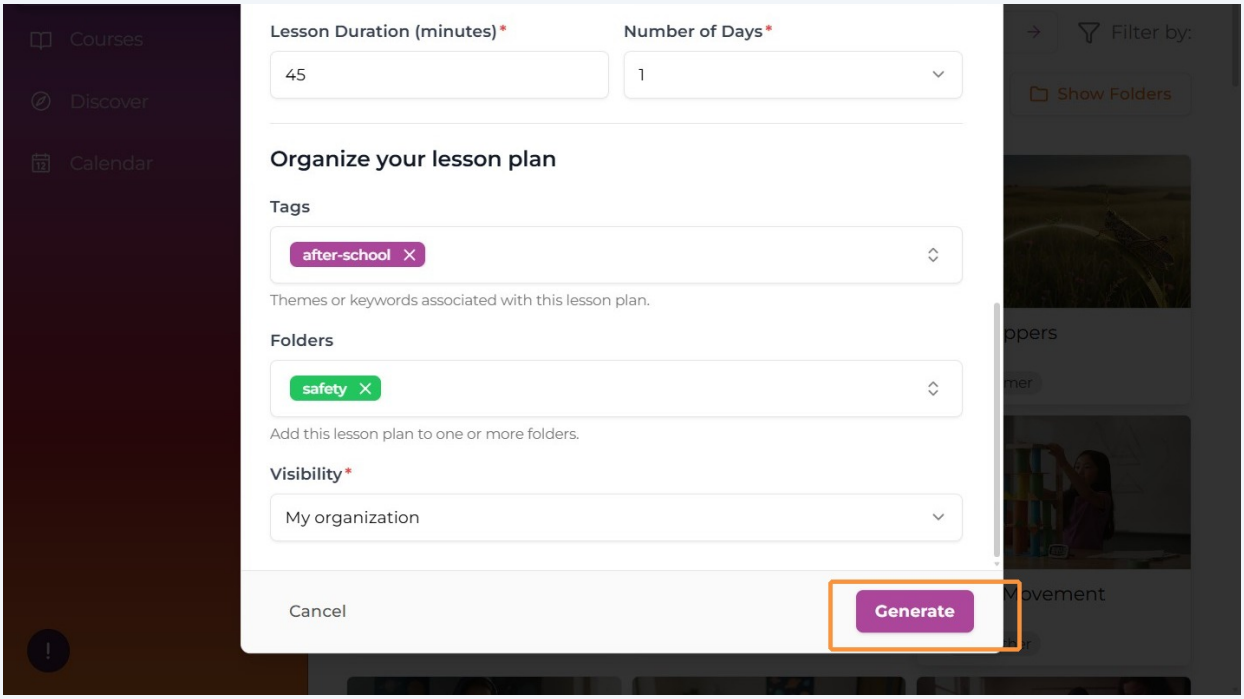

4 Select the expected energy of the class and how you would like students to interact with the lesson.

5 Decide the length and duration you want your lesson to be.

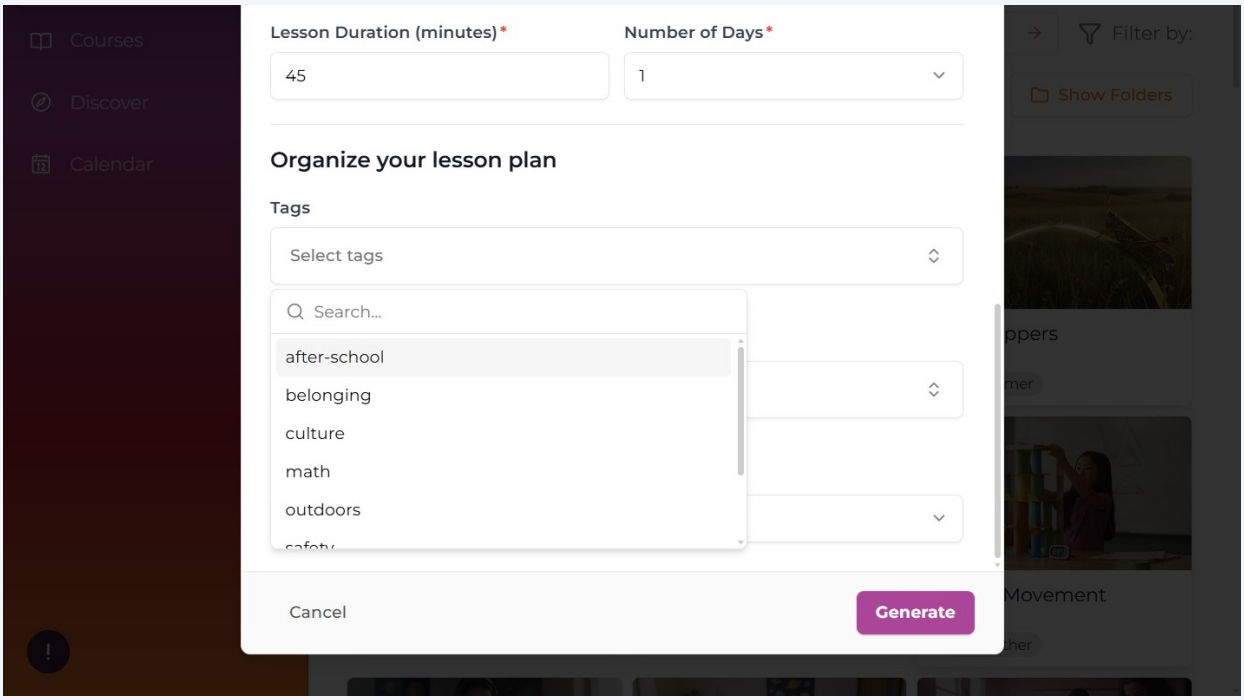

6 Organize your lesson and select generate to get your lesson.

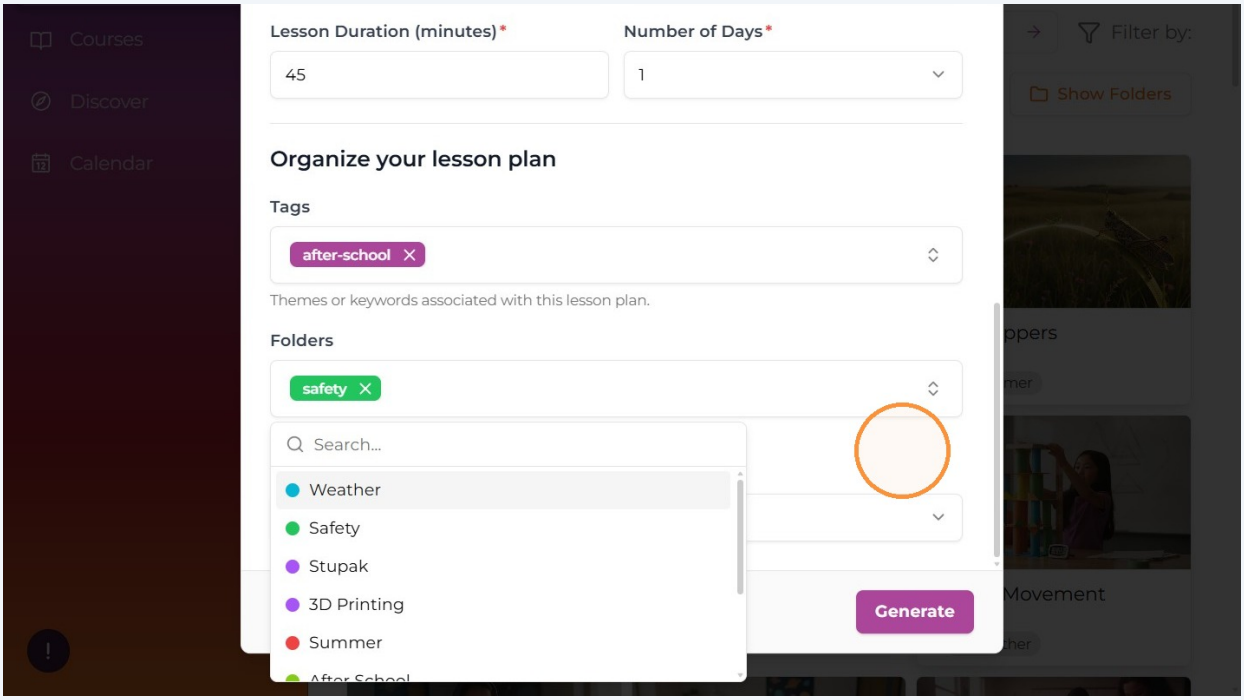

Lesson Organization

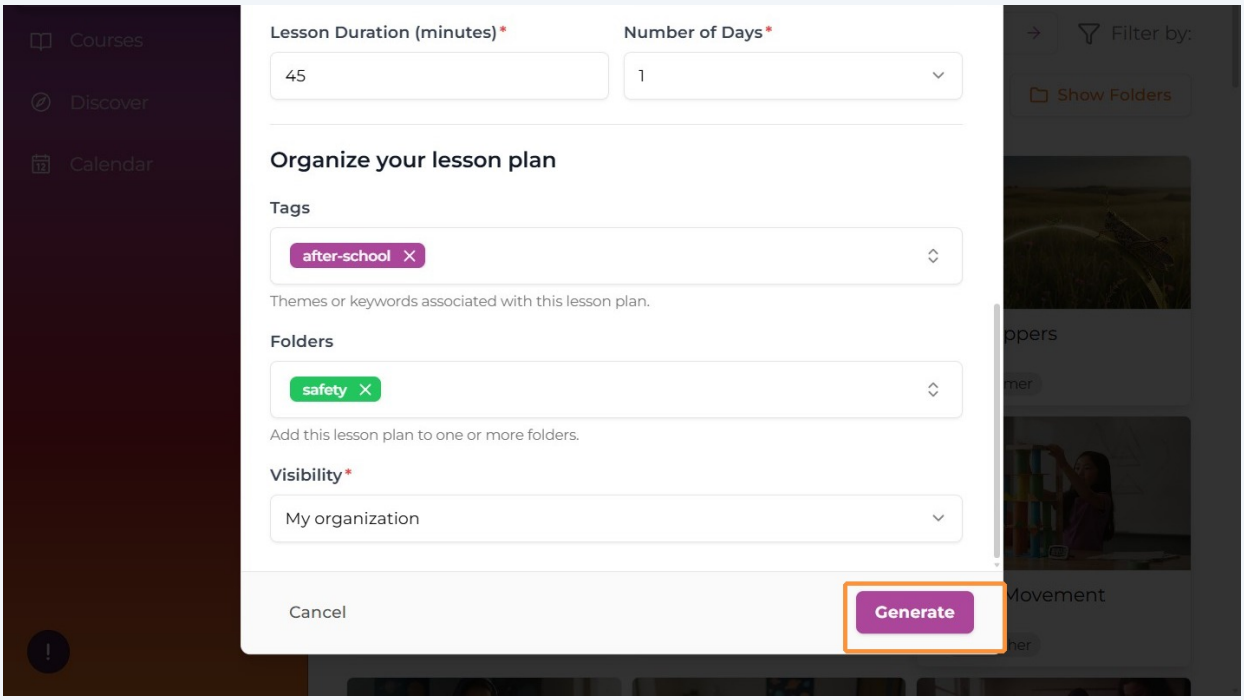

7 Tags are quick (1-2 word) identifiers for lessons. Select from existing tags or start typing out your new tag and select "create new"

8 Folders are great to organize lessons broadly. Select from existing folders or start typing out your new folder name and select "create new"

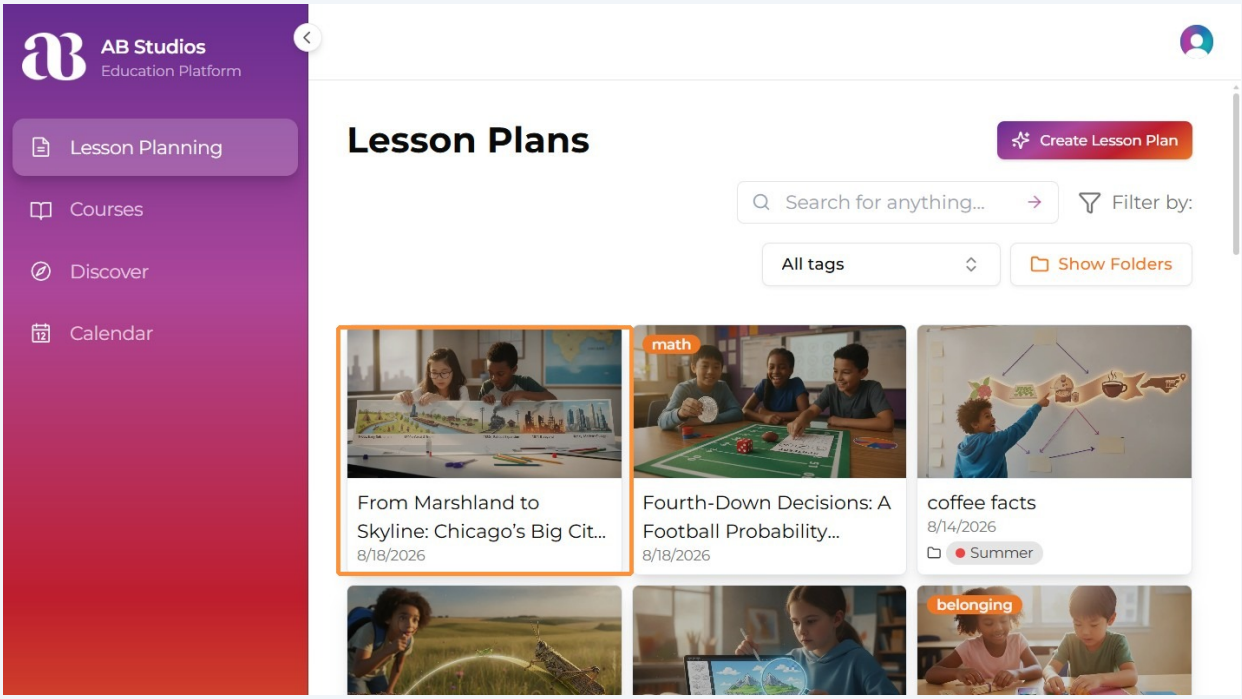

9 Select "Generate" to create your lesson with your preselected tags and folders.

Editing Lessons

10 Select the lesson you want to edit

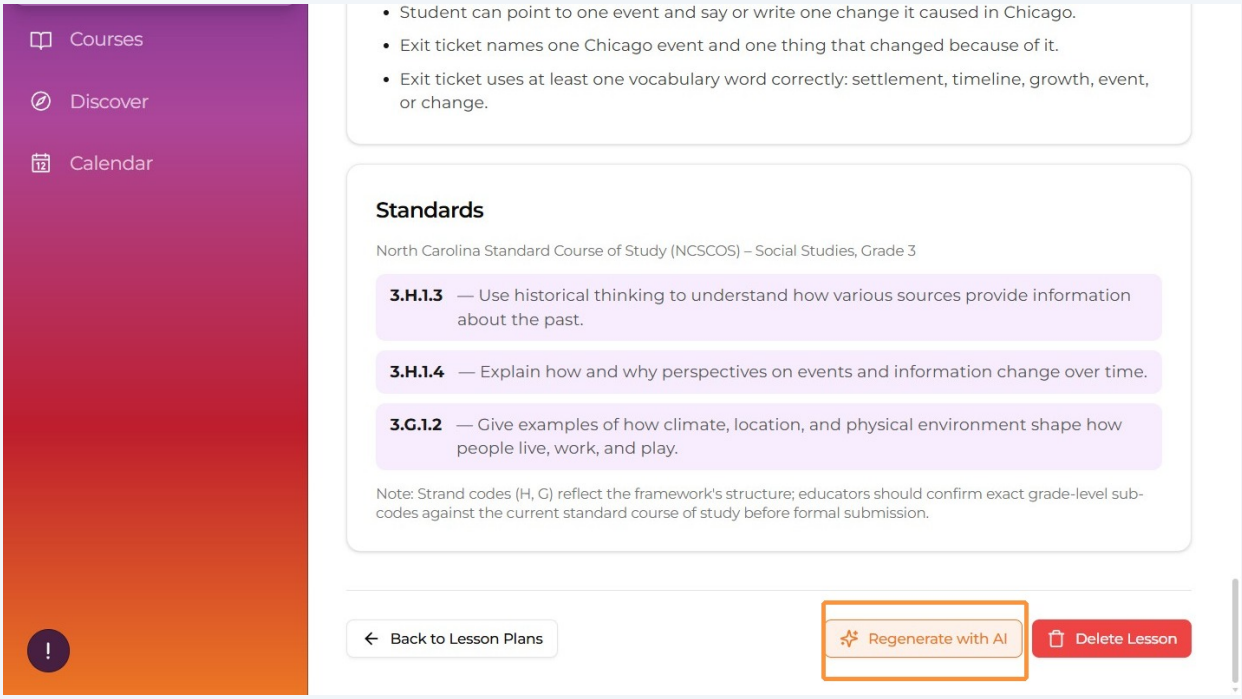

We have 2 ways to edit lessons:

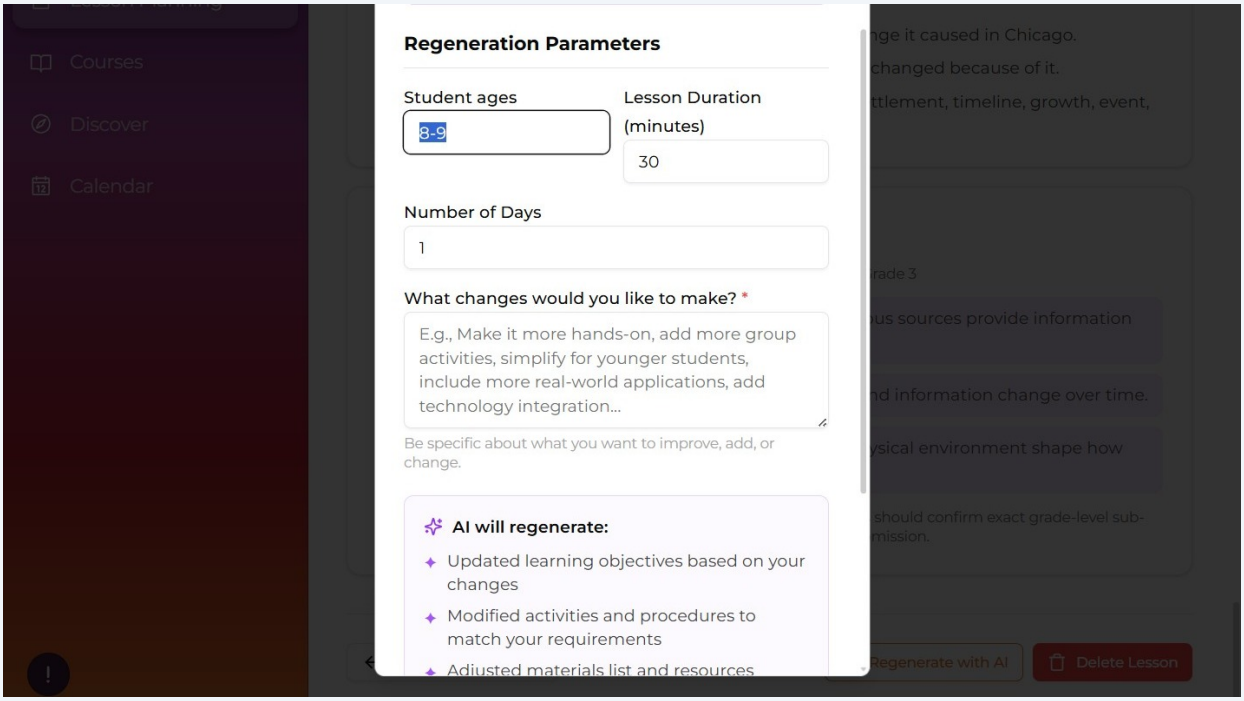

1. Regenerate the lesson - Simply tell us what you want to change and click submit
2. Manual Editing - Take full control and make the changes exactly as you want them

Regenerate Lesson

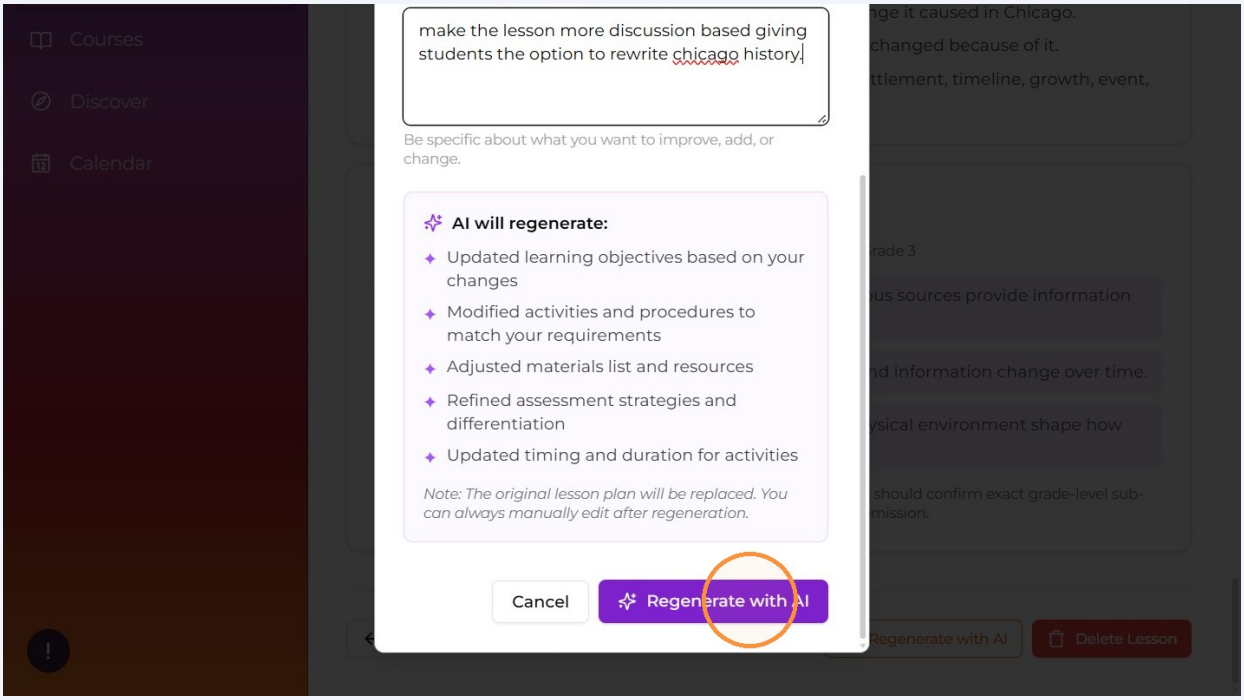

11 Scroll to the bottom of the lesson and click "Regenerate with AI"

12 You can regenerate student ages, lesson duration and the lesson itself.

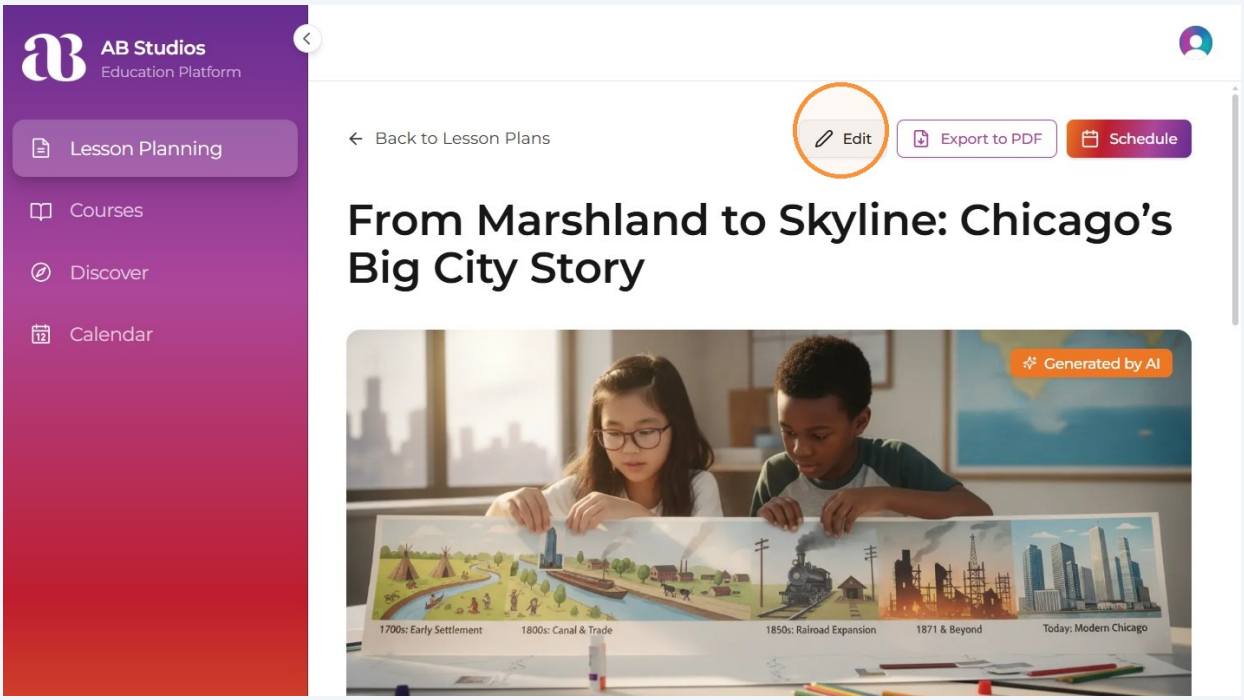

13 Once you're ready, click "Regenerate with AI"

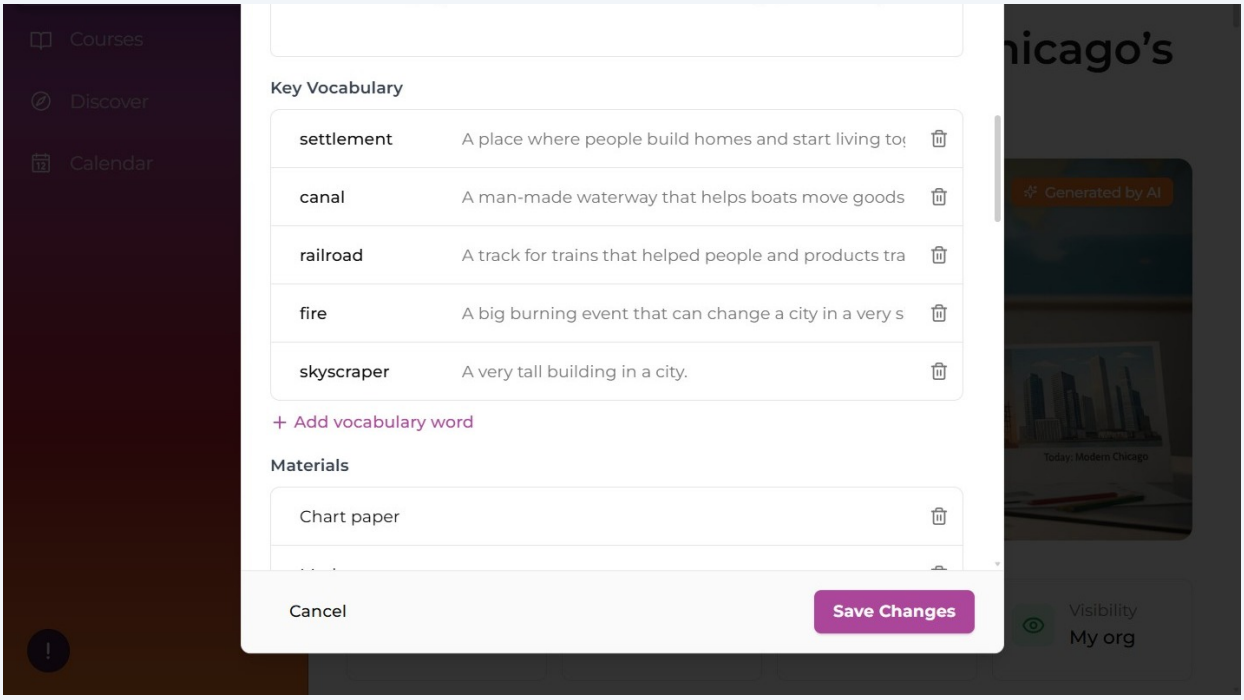

Manual Edit

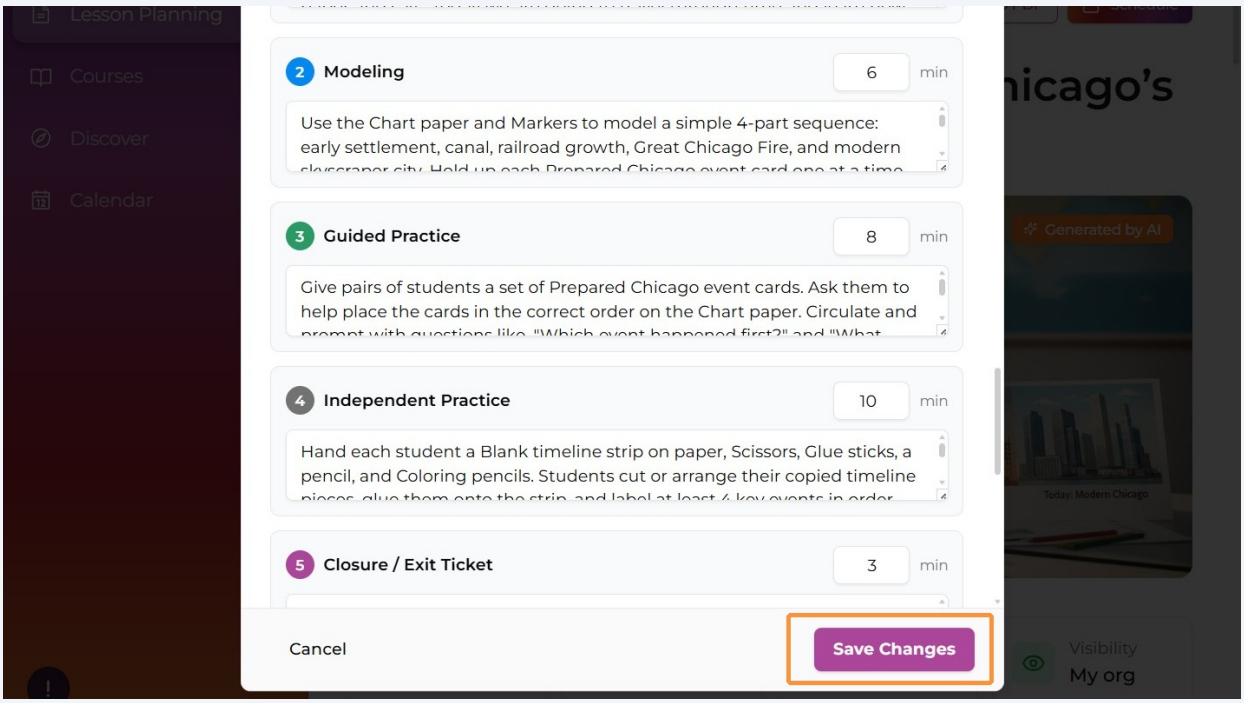

14 Click "Edit" from the lesson plan.

15 You are able to review each section of the lesson, removing and adding as you see fit.

16 Once ready, select "Save Changes"

17 Our trusty pilot Charlie has given you the all clear, you're ready for takeoff!
